### **UPDATE ON DROUGHT MANAGEMENT PLAN**

Hot and dry weather conditions have depleted area lake levels. Kingsland Water Supply Corporation is still in Stage One of our Drought Management Plan and currently is asking members to use voluntary water conservation measures to help lower our demand on the area lakes. Please insure your lawn watering efforts are as effective as possible. Check your sprinklers to make sure that there are no broken sprinkler devices or water that is being wasted by running off down streets, sidewalks or off of your property.

Daytime watering should be stopped as much of that water will evaporate prior to irrigating the intended area to be watered. It is requested to follow the following watering schedule for the most effective results:

1. Businesses, Churches, apartments, duplexes, or multifamily dwellings irrigation schedule is on Monday and Friday between the hours of 12:00 midnight and 10:00 a.m. and between 7:00 p.m. and 12:00 midnight. Hand watering with a hose is allowed anytime.
2. Residential with a physical address ending in an even number watering schedule is only on Tuesday and Saturday between the hours of 12:00 midnight and 10:00 a.m. and between 7:00 p.m. and 12:00 midnight. Hand watering with a hose is allowed anytime.
3. Residential with a physical address ending in an odd number watering schedule is only on Wednesday and Sunday between the hours of 12:00 midnight and 10:00 a.m. and between 7:00 p.m. and 12:00 midnight. Hand watering with a hose is allowed anytime.
4. No irrigation between the hours of 10:00 a.m. and 7 p.m.
5. Irrigation should be monitored to avoid run-off on the pavement, sidewalk or adjacent property.

**As of this notice, Kingsland Water Supply Corporation will be entering Stage 2 of its Drought Management Plan in the near future. These VOLUNTARY RESTRICTIONS WILL become MANDATORY when Stage 2 is declared.**

Thanks,

Leonard Leinfelder  
General Manager
